Hanging rail integrated in corner profile - suitable for recessed ceilings that don't use a side strip

When recessed ceilings are installed during a building project without side strips, then the Ceiling Strip offers many benefits. The Ceiling Strip replaces the corner profile used in recessed ceilings, and at the same time, creates a completely invisible picture hanging system. When this ceiling system is installed, the only element that is visible is a discreet shadow line along the edge of the recessed ceiling where the flexible picture hanging system is hidden. This shadow line can also camouflage any imperfections in the wall, such as those masked by a side strip. Thanks to the integration of the corner bracket and hanging system, the Twister gliders on the hanging cord also disappear completely into the ceiling: the hanging system is fully integrated and not visible.
